## Sample Breakdown of a Typical Joyce Farrell Answer

Let's analyze a typical solution approach she might take to a common programming problem:

Problem: Implement a function to find the maximum value in an array.

Farrell's Answer Breakdown:

### Step 1: Understanding the Problem

- Identify input: an array of numbers
- Output: the highest number in the array

### Step 2: Planning the Solution

- Initialize a variable to hold the maximum value, starting with the first element
- Loop through the array
- Compare each element with the current maximum
- Update the maximum if a larger value is found

### Step 3: Writing the Code

```
```python
```

```
def find_max(array):
```

```
    max_value = array[0]
```

```
    for num in array:
```

```
if num > max_value:
```

```
    max_value = num
```

```
return max_value
```

```
'''
```

Step 4: Explaining the Code

- The function takes an array as input
- Sets the initial max to the first element
- Iterates through each number
- Updates max_value whenever a larger number is encountered
- Returns the maximum value found

Step 5: Testing and Validation

- Test with different arrays, including edge cases (empty array, single element)
- Ensure the function handles all cases correctly
