Core Topics and Corresponding Answers

Below, we explore the main topics covered in Module 1, providing detailed solutions and insights.

- Place Value and Number Representation

Question Example:

Write the number 4,237 in expanded form.

Expert Answer:

To write 4,237 in expanded form, we break down each digit according to its place value:

- 4 thousands = 4,000
- 2 hundreds = 200
- 3 tens = 30
- 7 ones = 7

Expanded form:

$$4,237 = 4,000 + 200 + 30 + 7$$

This representation emphasizes the value of each digit based on its position, fostering a deeper understanding of the number's structure.

- Comparing and Rounding Numbers

Question Example:

Compare 3,456 and 3,465. Which is greater?

Expert Answer:

To compare these numbers, examine the digits from left to right:

- Thousands place: both have 3, so move to the hundreds.

- Hundreds place: 4 in both numbers.
- Tens place: 5 in 3,465 vs. 4 in 3,456. Since $5 > 4$, $3,465 > 3,456$.

Answer:

3,465 is greater than 3,456.

Question Example:

Round 3,476 to the nearest hundred.

Expert Answer:

Identify the digit in the hundreds place (4) and the tens digit (7):

- Since the tens digit (7) is 5 or more, round up.
- Increase the hundreds digit by 1: $4 + 1 = 5$.
- Replace the tens and ones digits with zeros.

Rounded number:

3,500

- Addition and Subtraction Strategies

Question Example:

Add 1,239 and 856 using a place value model.

Expert Answer:

Step-by-step:

- Break each number into hundreds, tens, and ones:
 - $1,239 = 1,000 + 200 + 30 + 9$
 - $856 = 800 + 50 + 6$

- Add corresponding parts:

- Thousands: $1,000 + 0 = 1,000$

- Hundreds: $200 + 800 = 1,000$

- Tens: $30 + 50 = 80$

- Ones: $9 + 6 = 15$

- Combine:

- $1,000 + 1,000 + 80 + 15 = 2,095$

Answer:

The sum of 1,239 and 856 is 2,095.

Tip: Using place value models helps students visualize the addition process and understand carrying over when necessary.

- Multi-Digit Subtraction with Regrouping

Question Example:

Subtract 2,487 from 3,000.

Expert Answer:

Step-by-step:

- Write the problem vertically:

...

3,000

-2,487

...

- Since 0 in hundreds, tens, and ones makes direct subtraction impossible, perform regrouping:
- Borrow 1 thousand from the 3,000 (which becomes 2,000), leaving 1,000 to be distributed.
- Convert:
- $1,000 = 100$ hundreds, but for simplicity, think in terms of place values:
- Ones: borrow 1 from the hundreds digit (which is zero, so you need to borrow further from the thousands).
- Borrow from 3,000: reduce to 2,000, and add 1,000 to the hundreds place (which was 0), making it 1,000.
- Now, perform subtraction digit-by-digit:
- Ones: 10 (since borrowed 1 from hundreds) $- 7 = 3$
- Tens: 0 (after borrowing) $- 8$; can't do, so borrow 1 hundred (which is 100) from the hundreds place:
- Hundreds: $1,000 - 100 = 900$ remaining
- Tens: $10 - 8 = 2$
- Hundreds: $900 - 4 = 896$
- Thousands: $2 - 2 = 0$

Result:

513

Answer:

$$3,000 - 2,487 = 513$$

Note: The detailed steps reinforce understanding of regrouping and place value understanding in subtraction.

- Modeling Multiplication and Division

Question Example:

Use arrays to model 6×4 .

Expert Answer:

Creating an array:

- Draw 6 rows, each with 4 dots or squares.

- Count all the dots: 6 rows $\times$ 4 columns = 24.

- This visual helps students see the total as a combination of groups, reinforcing the concept of multiplication as repeated addition.

Division example:

Divide 24 by 4 using grouping.

- Think: How many groups of 4 are in 24?

- Count: 4, 8, 12, 16, 20, 24 ? six groups.

Answer:

$$24 \div 4 = 6$$

Strategies for Effective Problem Solving

Beyond direct answers, the curriculum emphasizes strategies that foster flexible thinking:
