Technical Knowledge and Skills Questions

1. What are the main steps involved in wastewater treatment?

Sample Answer:

The primary steps in wastewater treatment include preliminary treatment (removing large solids and grit), primary treatment (settling out solids), secondary treatment (biological processes to degrade organic matter), and tertiary treatment (advanced purification to remove nutrients and pathogens). Each step involves specific equipment such as screens, clarifiers, aeration tanks, and filters.

2. Can you explain how a clarifier works?

Sample Answer:

A clarifier is a large tank where settled solids, or sludge, are separated from the treated water through gravity.
