Principles of Gel Filtration

- **Size-Based Separation:** Unlike affinity or ion-exchange chromatography, gel filtration does not rely on chemical interactions but solely on molecular size and shape.
- **Porous Stationary Phase:** The column contains beads with a defined pore size. Molecules larger than the pores are excluded and travel rapidly, whereas smaller molecules are slowed as they enter the beads.
- **Elution Profile:** The order of elution reflects the molecular sizes?larger molecules elute earlier, smaller molecules later.

The Historical and Scientific Significance at Harvard

Harvard University has been at the forefront of developing and refining gel filtration techniques since the mid-20th century. Pioneering researchers like G. M. Edelman and others have contributed to understanding protein structures and dynamics using gel filtration.
