The reaction releases energy, which can be harnessed for work, heating, or power generation.

2. Combustion Types

Combustion processes are classified based on how the fuel and oxidizer mix:

- **Complete Combustion:** Occurs when there is sufficient oxygen, producing maximum energy with minimal pollutants.
- **Incomplete Combustion:** Happens when oxygen is limited, producing carbon monoxide, soot, and other pollutants.
- **Pre-mixed Combustion:** Fuel and oxidizer are mixed before ignition, used in gas burners and engines.
- **Diffusion Combustion:** Fuel and oxidizer mix during the combustion process, typical in engines and furnaces.
