Answer:

- Expand the brackets:

$$- (3 \times 2x = 6x)$$

$$- (3 \times -4 = -12)$$

$$- (5 \times 3 = 15)$$

$$- (5 \times -x = -5x)$$

- Combine like terms:

$[$

$$6x - 12 + 15 - 5x$$

$]$

- Simplify:

$[$

$$(6x - 5x) + (-12 + 15) = x + 3$$

$]$

Final answer: $\boxed{x + 3}$

Question 2: Algebraic Equations

Question: Solve for x : $(2x + 5 = 3x - 4)$.

Answer:

- Rearrange to isolate x :

$\lceil$

$$2x + 5 = 3x - 4$$

$\rfloor$

- Subtract $(2x)$ from both sides:

$\lceil$

$$5 = x - 4$$

$\rfloor$

- Add 4 to both sides:

$\lceil$

$$5 + 4 = x$$

$\rfloor$

- Simplify:

$\lceil$

$$x = 9$$

$\rfloor$

Final answer: $\boxed{9}$

Question 3: Geometry ? Area and Perimeter

Question: A rectangle has a length of 12 cm and a width of 5 cm. Calculate its area and perimeter.

Answer:

- Area:

\[

$$\text{Area} = \text{length} \times \text{width} = 12 \times 5 = 60 \text{ cm}^2$$

\]

- Perimeter:

\[

$$\text{Perimeter} = 2 \times (\text{length} + \text{width}) = 2 \times (12 + 5) = 2 \times 17 = 34 \text{ cm}$$

Types of Questions and Their Focus

- Recall and Knowledge: Questions asking for definitions, formulas, or basic facts.
- Application: Situational questions requiring students to apply their knowledge to new contexts.
- Analysis: Data interpretation, graphs, or experimental results.
- Evaluation: Making judgments about experiments or scenarios, often involving pros and cons.

Sample Question Breakdown

For example, a typical question might be:

"Describe the process of photosynthesis and explain how environmental factors might affect it."

The answer should include:

- The basic process (light-dependent and light-independent reactions)
- The role of chlorophyll, sunlight, water, and carbon dioxide
- How factors like light intensity, temperature, and carbon dioxide concentration influence the rate

Understanding the question's focus allows students to tailor their answers effectively.

Detailed Analysis of the Answers

The core of this review involves examining the expected solutions, common misconceptions, and best practices for answering.

Question 1: Photosynthesis Process

Question: Describe the process of photosynthesis.

Expected Answer:

Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy stored in glucose molecules. The process primarily occurs in the chloroplasts within plant cells, which contain the pigment chlorophyll.

Key points include:

- Overall Reaction:

- Stages:

- Light-dependent reactions: Chlorophyll absorbs light energy, which excites electrons. Water molecules are split (photolysis), releasing oxygen, protons, and electrons. Energy is transferred to produce ATP and NADPH.

- Light-independent reactions (Calvin cycle): Using ATP and NADPH, carbon dioxide is fixed into glucose through a series of reactions.

Common misconceptions:

- Confusing the products of photosynthesis with cellular respiration.
- Forgetting that light energy is essential for the process.
- Overlooking the role of chlorophyll and the location within the chloroplast.

Expert tip: A well-structured answer clearly separates the stages and emphasizes the flow of energy and matter.

Question 2: Factors Affecting Photosynthesis

Question: Explain how light intensity and temperature affect the rate of photosynthesis.

Answer overview:

- Light intensity:
 - Increasing light intensity provides more energy to drive the light-dependent reactions.
 - As light intensity increases, the rate of photosynthesis initially increases proportionally.
 - A plateau occurs when other factors become limiting, such as CO₂ concentration or temperature.
- Temperature:
 - Enzymes involved in photosynthesis operate optimally within a certain temperature range.
 - As temperature rises, the rate increases due to faster enzyme activity.
 - Beyond the optimal temperature (around 25°C to 35°C), enzymes denature, and the rate declines sharply.

Common misconceptions:

- Assuming that increasing temperature always increases photosynthesis.
- Overlooking enzyme denaturation at high temperatures.

Expert tip: Use graphs to illustrate the relationship, emphasizing the concept of limiting factors.

Question 3: Practical Data Interpretation

Question: Given a graph showing the rate of photosynthesis at different light intensities, interpret the trend and suggest reasons for the pattern.

Expected answer:

- The graph shows a rapid increase in the rate at low light intensities, leveling off at higher levels.
- The initial steep slope indicates light is the limiting factor at low intensities.
- The plateau suggests other factors, such as CO₂ concentration or temperature, are now limiting the process.
- The pattern reflects the law of diminishing returns in photosynthesis as light intensity increases.

Analysis: Recognize the law of limiting factors and the importance of considering multiple variables in biological processes.
