Detailed Breakdown of the Yamaha Bear Tracker Wiring Diagram

Power Supply Circuit

The power supply circuit begins at the battery, which supplies 12V DC. The main power line typically runs through the ignition switch, which controls the overall power to the system. When the key is turned on, power flows to essential circuits such as the lighting, ignition, and starter.

Starting System Wiring

The starting circuit includes:

- Starter relay or solenoid
- Starter motor
- Ignition switch (start position)
- Battery connection

When the start button or switch is pressed, the relay closes, allowing current to flow from the battery to the starter motor, cranking the engine.

Ignition System Wiring

The ignition system involves:

- The ignition switch, which activates the system.
- The CDI (Capacitor Discharge Ignition) unit, which controls spark timing.
- The ignition coil, which transforms voltage to create a spark.
- The spark plug, igniting the fuel-air mixture.

The wiring diagram shows the connections from the ignition switch to the CDI, coil, and ground.

Lighting and Accessories Wiring

Lighting circuits include headlamps, tail lights, brake lights, turn signals, and indicators. These are

usually protected by fuses and controlled via switches. The wiring diagram details how these components connect to the power source and ground.

Charging System Wiring

The stator generates AC current when the engine runs, which is rectified and regulated by the regulator/rectifier to produce DC power for the battery and electrical system. The diagram illustrates these connections and how they integrate with the battery and load circuits.
