Sample Questions and Model Answers

Providing specific question-answer pairs can serve as a helpful reference. Here are some typical examples:

Question 1: What is the function of the mitochondria in a cell?

Answer:

The mitochondria are known as the powerhouses of the cell because they generate most of the cell's supply of adenosine triphosphate (ATP), which is used as a source of chemical energy. They also play roles in other processes such as signaling, cellular differentiation, and cell death.

Question 2: Explain the process of natural selection.

Answer:

Natural selection is the process by which organisms better adapted to their environment tend to survive and produce more offspring. This process involves variation within populations, differential survival and reproduction based on traits, and the inheritance of advantageous traits, ultimately

leading to evolutionary change over generations.

Question 3: Describe the structure of a DNA molecule.

Answer:

DNA (deoxyribonucleic acid) is composed of two strands forming a double helix. Each strand consists of nucleotides, which include a sugar (deoxyribose), a phosphate group, and a nitrogenous base (adenine, thymine, cytosine, or guanine). The bases pair specifically (A with T, C with G) via hydrogen bonds, holding the two strands together.
