Sample Questions and Model Answers

Understanding the types of questions asked can boost confidence. Here are examples inspired by the 2014 April assignment:

Question 1: Describe the process of DNA replication and explain its significance in cell division.

Model Answer: DNA replication is a semi-conservative process where the double helix unwinds, and each strand serves as a template for the formation of a new complementary strand. Enzymes like DNA helicase unwind the DNA, while DNA polymerase adds nucleotides to form new strands. This process ensures that each daughter cell receives an identical copy of genetic information during cell division, which is essential for growth, repair, and reproduction.

Question 2: Explain how natural selection leads to evolution.

Model Answer: Natural selection is a mechanism of evolution where individuals with advantageous traits are more likely to survive and reproduce. Over time, these beneficial traits become more

common in the population. This process results in gradual changes in species, allowing them to adapt to their environments and leading to the evolution of new species.

Question 3: Illustrate and label a diagram of a plant cell and describe the function of the chloroplast.

Model Answer: (Include a labeled diagram of a plant cell highlighting the chloroplast.) The chloroplast is the site of photosynthesis, where light energy is converted into chemical energy in the form of glucose. It contains chlorophyll, which absorbs light energy necessary for the process.

Importance of Mastering Life Science Concepts for Grade 12 Students
